Farm Babies

Objective
Students will name baby farm animals and their parents using correct terms. Students will form correct plural nouns orally. Students will count to tell the number of objects and write the correct numeral to show their answer.

Background
One sign of spring in rural Oklahoma is all the baby animals you see out in the fields with their moms. Spring is the time of year when most farm animals are born.

Cats are among the best mothers in the animal kingdom. The mother cat will take care of all the needs of her kittens. Farmers often keep cats in their barn to keep away mice.

Language Arts
1. Copy the flash cards included in this lesson with the corresponding information on the back. Cut them out.
   —Lead a discussion about parent and baby animals, using the chart provided.
   —Show students the flash cards, and share the information about the animals on the back of each card. Students will practice saying the proper name for each baby and its parents.

Science
1. Use the “Farm Babies” chart to reinforce students’ knowledge of animal names.
2. Write the names of mother and father animals on strips of paper in one color and the names of baby animals on strips of paper in another color.
   —Divide the class in half.
   —Distribute papers with the mother/father names to half the students, and baby names to the other half.
   —Designate a place in the classroom to be the barn, and have all the “mothers” and “fathers” gather there.
   —Explain that when you call out “The barn is open,” all the babies should scatter to various spots in the room.
   —To get back to the barn safely, the baby animals must correctly say the names of their mothers and fathers. The baby must then find its mother/father in the barn.
3. Hand out copies of the “Farm Babies” worksheet, and have students draw lines to connect the mothers and fathers in the outer columns with the babies in the center column.
4. Contact your county Extension office for information about hatching

www.agclassroom.org/ok
chickens in your classroom through the 4-H embryology project. Look in the telephone directory under “county offices.”

5. Visit a barnyard or the animal barn at your county fair. A county Extension agent or your high school’s agricultural education instructor can help make arrangements.

Math
1. Hand out worksheet “Count the Farm Animals” for students to complete.

Swine
- sow
- pigs
- boar

Cattle
- cow
- calf
- bull

Sheep
- ewe
- lamb
- ram

Chickens
- hen
- rooster
- chick
Cattle

A beef cow usually has her first calf at two years of age. Then she usually has a calf every 12 months. A beef calf gets milk from her mother for about seven months. A beef cow needs one to two acres of grass to feed her through a year. She will eat on land that we can’t use for growing crops.

Swine

A mother pig is called a sow. A sow can have from four to 14 offspring. To help protect the babies, the mother, or sow, is put in a “farrowing crate.” This crate keeps the mother from lying on her new babies and crushing them. It helps keep the baby pigs alive and does not hurt the mother pig.

Sheep

A ewe, or mother sheep, usually gives birth to one, two, or sometimes three lambs at a time. The baby lambs stay with their mother for four to five months and live off their mother’s milk. During this time the sheep are sometimes many miles from the safety of the farmer’s barn.

Chickens

Chicks hatch from eggs. It takes about three weeks for them to develop and come out of their eggshells. Every chick is born with a small tooth in its beak which helps it peck its way out of the shell.
Farm Babies

Draw lines to match the fathers, babies and mothers.

- Ram
- Lamb
- Cow
- Gander
- Goose
- Rooster
- Chick
- Bull
- Ewe
- Goslings
- Calf
- Pig
- Sow
